

Path 4 Career Project set to help Maltese Graduates shine in a competitive workforce

Technology and Consultancy company Acrosslimits has announced their partnership with Italy, UK, Romania and Spain for the development of an innovative training program ideal to equip school graduates with a major competitive edge entering the workforce.

The training program will empower graduates with skills that are often neglected in the classroom and usually only attained during work experience itself. These soft skills however, are becoming significantly crucial assets when it comes to finding a job and developing one's career

The custom-made training module will consist of 3 chapters and 3 innovative educational games which will integrate the top 3 skills increasingly sought after by employers –

- Soft Personal Skills: improving skills targeted by simulating realistic work situations.
- Career Plan Design and implementation
- Professional Internships: developing the skills to go through an interview for an internship, using a virtual recruitment agent in a simulated recruitment interview.

'There are simply not enough people around to meet the demand of work available in Malta today. This explains the presence of so many non-Maltese working in our country. It is becoming increasingly necessary for youths of today, regardless of their level of academic qualification and their knowledge in their area of expertise – to acquire soft skills', Project Manager in Malta, Ms Francica said.

The Path 4 Career training modules will be used in 9 training workshops reaching 90 higher education graduates and best of all, completely free of charge. Training workshops are set to take place November this year and are still open for registrations.
